PRESSEINFORMATION

CIM @ ICT & Logistiek in Utrecht - WMS standard solutions for manual and automated warehouses

Fürstenfeldbruck, 27/10/2021 – The ICT & Logistiek trade fair is opening its doors again in Utrecht on November 10 and 11, 2021– and CIM will be taking part for the second time. You'll find our logistics experts at booth 01.D110 showcasing the company's latest innovations as well as emerging trends in the logistics software sector.

With its PROLAG®World system, CIM is a driver of innovation in the field of **warehouse management software**. The focus of this year's exhibition, among other things, will be our fully automated warehouse control system, processes for storing hazardous goods and materials, as well as our very own shipping system PROSEND®.

A special feature at our booth will be our production software **PROLAG®World Production**. With this standard system, CIM has been revolutionising production processes for numerous companies in numerous sectors over the last several years. By incorporating the strengths of warehouse logistics into production planning, the WMS can achieve full transparency along the entire intralogistics chain. From putaway and goods transformation through to shipping of the manufactured goods, all data is 100 % traceable – right down to which batch of raw materials was used. In addition to batch tracking, the system offers improved material flow, automatic replenishment, optimised inventory and raw material management through campaign planning, as well as increased efficiency through intelligent process design.

Our booth will feature one of the highlights of the trade fair: Using the ergonomic **freehand scanner NIMMSTA HS 50 and supported by our team**, all our giveaways can be picked live – safely into the hands of our visitors.

CIM will be at booth **D110** in **hall 1**.

Arrange a personal consultation appointment at <https://bit.ly/2Zn86eZ>. And secure your free trade fair ticket here: <https://bit.ly/3jDiPbS>.
